

# Glaco Roll On Max

10363  
EN

Glaco Roll On MAX is the biggest glass coating ever! 300 ml of capacity, a new shape of the bottle and the same excellent properties that for over 30 years guaranteed Soft99 world leadership in the field of hydrophobic coatings for glass surfaces. By forming a hydrophobic layer on the surface, it allows water droplets to be blown away from the windshield at speeds as low as 45 km/h! This makes Glaco Roll On MAX perfect for city driving, but also on long journeys and even in winter, reducing the build up of frost and ice!

Directions: 1. Wash the vehicle thoroughly and prepare the windows with a dedicated product – Glaco Compound Roll On or Compound Z. 2. Take the cap off and apply the applicator onto a dry windshield. Apply pressure to the bottle to let the fluid out and rub it firmly onto the windshield. 3. After application, let the coating sit on the glass' surface for 5-10 minutes. After that time, wipe off all remaining liquids with a slightly damp towel or microfiber for best results. 4. Finish the process by polishing the glass' surface with a dry, clean towel or microfiber. ! Make sure not to apply the coating onto a wet glass surface, otherwise it may cause streaks and scratches.

Contains: propan-2-ol.

Highly flammable liquid and vapour. Causes serious eye irritation. May cause drowsiness or dizziness. Keep out of reach of children. Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking. Avoid breathing vapours/spray. Wear protective gloves/eye protection. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Dispose of contents/container to properly labelled waste containers according to national law.
